Client: Testy McTestface (1306) Sep 20, 2026

Redetermining Eligibility Evaluation

1. Child Name

Child First Name
Testy

Child Last Name
McTestface

Child's DOB:
10/4/2023 (age 2)

Today's Date
09/20/2026

Child Age (in months)
34

Important Contact Information:

2. Have there been any changes to the health care practice or clinic your child goes to for child (regular) checkups, shots or when he or she is sick? If not, please skip to section 3.
Yes

Practice or Clinic Name:

Physician Mailing Address

Physician Name

Physician Phone

Child Evaluation or Assessment & Medical Information:

3. Child's General Health:

Does your child have any new medical diagnoses?
No

Primary Diagnosis or Diagnoses

Does your child see any new medical specialists?
No

Is there anything about your child's health (special equipment, medications, allergies, other medical behavioral health or physical information)that the team should know about to better plan and provide services to your child and family, including specific diagnoses?

Relevant Medical History Updates:

Reason for Referral:
Redetermining Eligibility Evaluation

4. Nutrition and Growth:

Are there any new concerns about your child's nutrition or growth?
No

5. Dental:

Has your child seen a dentist?
Yes

Are there any concerns about your child's dental health?
No

6. Vision:

Has your child's vision been screened or tested in the last 6 months?	When?	By?
Yes	09/20/2026	Jenny Riat, MA, CCC-SLP

Results:
Rescreen

Comments regarding follow up:
Family completed vision screening checklist. No concerns noted. Formal screening recommended to adhere with best practices for vision loss identification.

7. Hearing:

Has your child's hearing been screened or tested in the last 12 months?
Yes

Left Ear Results:
Rescreen

Right Ear Results:
Rescreen

Comments regarding follow up:
Clinician completed HEAR checklist with family. No concerns noted. Formal in-office screening recommended to adhere with best practices for hearing loss identification.

8. Completed Vision & Hearing Screening Form

Developmental Domain	Range of Delay	Developmental Level Min Age	Developmental Level Max Age	Results Summary Including Qualitative Information
Adaptive				n/a completed by other team member
Cognitive	Within Age Expectation	29	29	Raw score: 38 Standard score: 100 Age Equivalent: 29 months Percentile rank: 50th Skills: Testy enjoys looking at picture books with an adult and is able to point to or identify familiar pictures. He can manage multiple toys during play, stack six to seven blocks, and imitate play activities using substitute objects. Testy is also able to match objects to corresponding pictures and demonstrates emerging symbolic play skills, including sequencing related actions in play across two to three steps. He demonstrates understanding of early concepts such as “one,” “one more,” and “all,” can identify his age, match basic shapes, and arrange graduated sizes in order. Things to work on: Testy would benefit from continued opportunities to spontaneously name familiar objects during play and everyday routines. He can continue developing his ability to participate in finger plays by imitating both the words and accompanying actions. Additional opportunities to practice

				identifying whether he is a boy or girl, counting rote to five, and counting up to five objects will support his continued development of early cognitive and pre-academic skills.
Communication	Informed Opinion	19	28	Receptive Raw score: 22 Receptive Standard score: 98 Receptive Age Equivalent: 28 months Receptive Percentile rank: 45th Expressive Raw score: 16 Expressive Standard score: 81 Expressive Age Equivalent: 19 months Expressive Percentile rank: 10th Overall Communication Standard score: 89 Overall Communication Percentile rank: 23 Overall Communication Age Equivalent 24 months, >20% delay Overall Skills: Testy demonstrates emerging expressive communication skills and has made meaningful progress in his use of words, sounds, signs, and word combinations. He can name familiar characters or items from books, TV, or movies and uses single words to communicate a variety of wants, needs, and ideas depending on the context. He has a growing vocabulary and uses words, sounds, and signs to communicate, including a consistent word or sign for “drink.” Testy is increasingly combining words to communicate, with recent examples including phrases such as “mama down,” “more beads,” “Daddy choo-choo,” and “Daddy

look." He also imitates words and sounds modeled by familiar adults and is showing increased willingness to repeat new words.

Overall things to work on:

Testy would benefit from continued opportunities to follow two-step directions that are not related to one another and to understand increasingly complex language concepts. Practice can include identifying objects based on negative statements, responding to "who" and "whose" questions, and following directions involving positional concepts such as "beside," "under," "in front of," and "behind."

Informed opinion:

Testy shows a significant delay in development in expressive communication.

Testy's spontaneous expressive vocabulary includes the following words: mommy, daddy, Rardy, Lili, baby, no, go, up, down, ball, bubble, yeah/mhmm. Testy primarily communicates using gestures, vocalizations, and single words. Testy is only just now starting to use words to communicate with others given the following supports in the home setting: verbal choices, visual choices, adult modeling, wait time, language expansion/recasting, narration/parallel talk, and following his lead and interests. Without these environmental supports in place, Testy is not showing these skills (i.e. he is not

				able to use these skills with new partners or in new settings). Testy is not yet able to use language on demand to respond to others which is an essential function of language at this age. A child of this age should be using 3-4 word phrases, asking/answering simple questions, using early pronouns (i.e. I, me, my, you) and engaging in back and forth conversations independently. They are spontaneously using words to communicate for a variety of purposes to gain & share information with others across settings and situations. Testy is not showing any of these skills. Additionally, he is not yet able respond to simple questions (i.e. what's that?), name items, or make requests (i.e. use language skills in the moment) without support from adults or environmental modification. The DAYC-2 reflects an expressive age equivalent of 19 months. This tool is not sensitive enough to capture the missing skills that Testy has which put his functioning below 19 months. Testy requires the following environmental strategies and supports from his communication partners in order to show the skills he has on the DAYC-2. Without these modifications, Testy is independently functioning below 19 months which is considered a significant delay in development.
Social and Emotional	Within Age Expectation	39	39	Raw score: 44 Standard score: 112 Age Equivalent: 39 months Percentile rank: 79th

Skills:

Testy demonstrates many positive social-emotional skills and enjoys engaging with familiar adults and participating in play activities. He shows pride in his accomplishments, listens quietly to stories and music, and enjoys simple make-believe play. He demonstrates increasing independence and often attempts to complete activities on his own. Testy looks toward others when communicating, usually takes turns, asks for assistance when needed, and demonstrates awareness of others' emotions. He can transition between activities with adult support, participate appropriately in group activities, follow classroom rules, gain attention from peers in appropriate ways, and return objects to their appropriate places. He is also developing the ability to quiet his body following active play and enjoys participating in competitive or interactive games.

Things to work on:

Testy would benefit from continued opportunities to participate in familiar songs with an adult, engage in dress-up and pretend-play activities, and participate in simple group board or card games. He can continue developing his ability to explain game rules to others and practice expressing frustration or anger using words rather than physical actions. Additional opportunities to exchange items or activities with others will support his social communication, flexibility, and

				reciprocal interactions with peers.
